1 Introduction

The document provides an overview of the CCS811 evaluation kit and covers the following topics: evaluation kit general description, software installation, board interface, test points, schematics, PCB layout and bill of materials (BOM).

2 General Description

The CCS811 evaluation kit comes with the following components:

- ENS-USB-I2CIO : USB to I²C board
- ENS-CCS811-SB : CCS811 sensor board
- Card with URL to download application software
- USB Micro-B cable

2.1 USB to I²C Board (ENS-USB-I2CIO)

The USB to I²C board refer to as ENS-USB-I2CIO, as shown in Figure 1, allows control and measurement of the CCS811 sensor board using the ENS Dashboard.

Figure 1 USB to I²C Board

The USB to I²C board has the following key features:

- Silicon Labs CP2112 device which provides a simple solution for controlling I²C slave, the nWAKE and nRESET signals and monitors the nINT signal
- Board dimensions 42mm length x 18mm width
- Standard micro USB connector and board interface with power (VDD, GND) and I²C Signal (SCL, SDA).
- Supports Standard I²C mode (100 kHz) and Fast I²C mode (400 kHz)
- Supports 1.8 V or 3.3 V (via a solder link)

By default the USB to I²C board provides a 1.8V supply to the CCS811 sensor board. Optionally this can be configured to provide a 3.3V supply by moving the solder bridge to the '3V3' position (in PCB silkscreen), see Figure 2.

Figure 2 USB to I²C Board Voltage Select

2.2 CCS811 Sensor Board (ENS-CCS811-SB)

The CCS811 sensor board refer to as ENS-CCS811-SB, as shown in Figure 3, is an evaluation platform for the CCS811 device. It contains a CCS811 digital VOC gas sensor with an ENS210 relative humidity and temperature sensor and has I²C interface which is compatible with the USB to I²C board for USB connection to PC / laptop

Figure 3 CCS811 Sensor Board

The sensor board has the following key features:

- CCS811 ultra-low power digital gas sensor for monitoring indoor air quality
- ENS210 relative humidity and temperature sensor with I²C Interface used to compensate for environmental changes
- Board dimensions 25mm length x 18mm width
- Board interface with power (VDD, GND) and I²C Signal (SCL, SDA).
- Sensor chip supports standard I²C mode (100 kHz) and fast I²C mode (400 kHz)
- Sensor board supports 1.8 V to 3.3 V

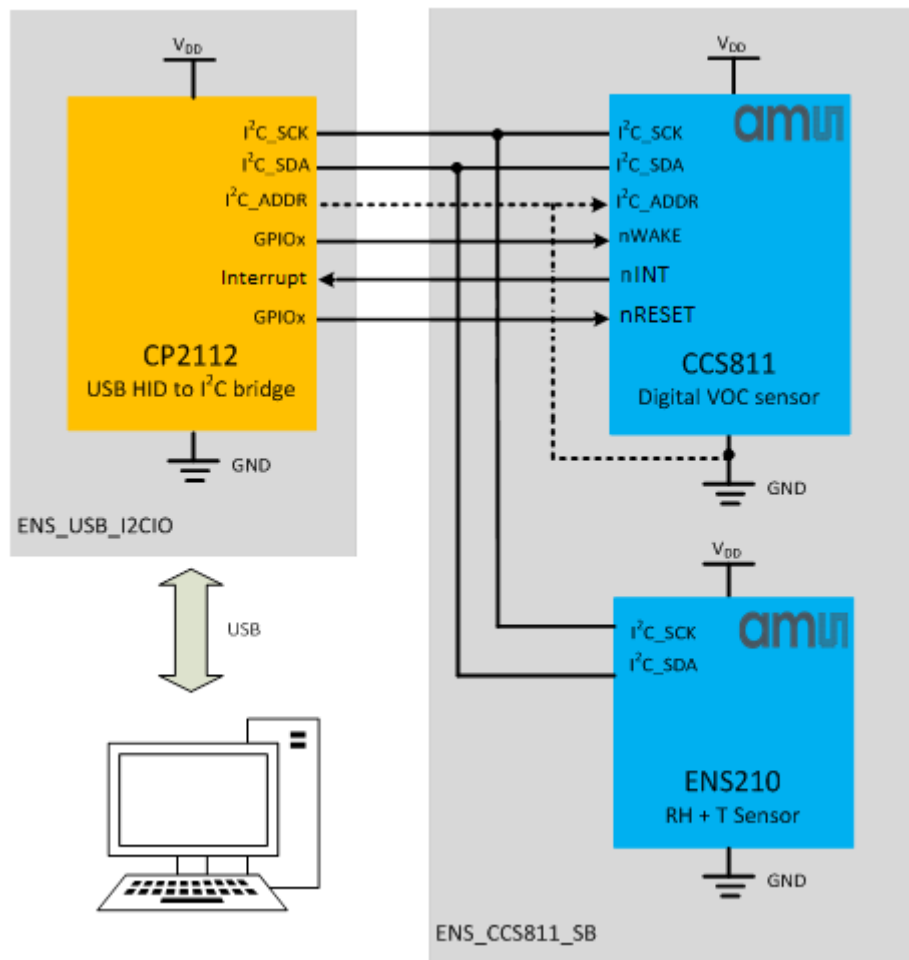

By plugging the CCS811 sensor board into the USB to I²C board as shown in Figure 4, direct connection to PC is enabled via USB.

Figure 4 CCS811 Sensor Board with USB to I²C board

A block diagram of the CCS811-LG_EK_ST which illustrates the end-to-end connection between the PC via USB to I²C board (ENS-USB-I2CIO) and CCS811 sensor board (ENS-CCS811-SB) is shown in Figure 5 below.

Figure 5 Block Diagram of CCS811-LG_EK_ST

Relative humidity and temperature data from ENS210 can be read on the I²C bus and this information can be written to CCS811 to compensate for temperature and humidity changes for indoor air quality monitoring.

3 Software Installation

Quick steps:

- Connect CCS811 sensor board (ENS-CCS811-SB) into USB to I²C board (ENS-USB-I2CIO)
- Connect USB to I²C board (ENS-USB-I2CIO) via USB cable to Windows PC
- Install Windows PC ENS dashboard application available at <http://ens.ams.com/>

The ENS Dashboard application setup wizard will be launched and guide you through the installation, please refer to the ENS Dashboard user manual.

4 Board Interface and Test Points

4.1 Board Interface

The signal labels and pin designators for the interface are shown in Figure below.

Figure 6 Board Interface

in (s)	Label	Description
1	VDD	Supply voltage
2	SDA	I ² C data
3	SCL	I ² C clock
4	nWAKE	Wake up pin. Active low
5	nINT	Optional interrupt pin. Active low
6	nRESET	Optional reset pin. Active low
7	GND	Ground

4.2 Test Points

There are 3 test points for I²C address, GND and PWM as shown below on the CCS811 sensor board (ENS-CCS811-SB).

Figure 7 CCS811 Sensor Board Test Points

5 Schematic, PCB Layout and Bill of Materials

The schematic design, PCB layout and bill of materials (BOM) for CCS811-LG_EK_ST is documented in the following sections.

5.1 Schematic Design

The schematic design for USB to I²C board (ENS-USB-I2CIO) and the CCS811 sensor board (ENS-CCS811-SB) is documented at the end of the document.

5.2 Bill of Materials (BOM)

The bill of materials (BOM) for the USB to I²C board (ENS-USB-I2CIO) and CCS811 sensor board (ENS-CCS811-SB) are shown in the following sections.

5.2.1 USB to I²C Board (ENS-USB-I2CIO)

Figure 8 Bill of Materials (BOM) for the USB to I²C Board

Label	Description	Part Number	Manufacturer
U1	IC - USB to I ² C bridge QFN24	CP2112	Silicon labs
U2	SOT23	MCP1700T-1802E/TT	Microchip
U3	ESD Protection Device SOT-14	SP0503BAHTG	LITTLEFUSE
